PERSONAL PROJECTS

Crop Recomendation system
- Recomends farmers which crops to grow in there filds
- Most farmers face capital loss because they fail to choose the right crop to cultivate
- our machine learning model takes input from farmers like the acre of land,temparatue,moisture content,date,place,NPK values of soil
- these inputs are then submitted to machine learning model that runs and gives suggestion to what crop to grow

Music streaming webapp(React-Java-sql)
- A website for seamlessly streaming music online
- A login module that has login for admin and customer
- Admin can do every thing like adding a song,deleting a song
- A customer can only perform read operation on song
- A customer has to buy subscription in order to listen to songs

Notes-management webapp(React.js-Express.js-sql)
- Simple Notes management website where user can store Notes
- User's must create an account to store and only his notes are accessable to him where he can perform CRUD operation
- Used authentication where a user has to authenticate himself and an auth-token is generated for him
